

I plan on attending the University of California Santa Barbara where I will major in Applied Mathematics. I am interested in how math can be applied in the real world, and will be working towards internships as I simultaneously work towards my Bachelor's degree. In addition to internships, I plan to be involved in student government at the University of California Santa Barbara and work part time. I will be engaged in the community of Santa Barbara, where I plan on joining clubs and programs to add to my college experience. Academically, I plan on being involved in honors programs and striving to make the Dean's list as I make my way through college. After earning my Bachelor's degree in Applied Mathematics, I will work toward my Master's and PhD degrees to further my knowledge on the specific areas within Applied Mathematics and begin searching for researching opportunities or other job openings. I plan on researching Applied Mathematics and teaching at a professional level to fund my research. As my career becomes more complex as my research becomes more thorough, I plan on challenging myself and striving for higher levels. I am determined to finish my higher education and research fully on the subject of my interest so that I can make a career out of it and start a family. Once I have met someone and feel financially and emotionally ready to settle down, I will look forward to starting a family while keeping in mind our combined finances and how that will affect our careers. As I start taking bigger steps like this one in my life, my career will always come first and I will continue setting goals and being successful.
